

The run ended. The work did not.

A clean stop can hide an empty destination.

THE COURIER TEST

The journey ended. The parcel did not arrive.

The courier is an illustration. The acceptance model is the argument.

Reliable agents need a second finish line.

Two clocks. Two finish lines.

Execution stops inside the system. Acceptance closes at the promised destination.

A process exit alone does not traverse the acceptance gate.

The clocks often agree. They are still different.

Stopping is internal. Success is evaluated.

The 2025 CUA report describes an action loop and reports benchmark task success.

ACTION LOOP

Model decides it is done

Perception, reasoning, action

May request user input

TASK EVALUATION

Task score passes

WebArena, WebVoyager,
OSWorld

Different environments and
scoring rules

Historical CUA results do not measure GPT-6 Astra or the Jump harness.

Do not substitute loop completion for task completion.

A long run still ends at acceptance.

The Jump case keeps goals, monitoring, evaluation and human judgment in the system.

01**Define**

Set the problem, environment, criteria and constraints.

02**Observe**

Monitor data, time and intermediate sense.

03**Evaluate**

Judge output against the declared criteria.

04**Accept**

Critical validation ends with human acceptance.

05**Control**

A research signal remains separate from execution authority.

Provider-published customer account; no independent productivity rate is supplied.

Autonomy does not erase the review boundary.

Put the receipt after the last click.

A destination check turns motion into inspectable delivery.

One accepted result is not a reliability rate; recovery was not exercised.

Acceptance needs evidence where the result was promised.

A clean exit can still be UNKNOWN.

Keep process health and delivery evidence in separate columns.

PROCESS	DESTINATION	JOB STATE
Clean	Present and passes	ACCEPTED
Clean	Missing or unreadable	UNKNOWN
Error	Resumable evidence	RECOVER
Any	Present but fails	REJECTED

Proposed control model, not measured production rates.

Missing evidence stays missing.

The second finish line

The source Special supplied one accepted result. Primary sources define the surrounding boundaries.

S1 Computer-Using Agent

2025-01-23

S2 How Jump Trading is scaling quant research with ChatGPT

2026-10-06

S3 The accepted result is the unit

2026-10-08

No production reliability rate, recovery time or cost comparison is claimed.

The parcel on the desk is the unit that matters.
