Three gauges. One said yes.

Bitcoin ETP flows turned positive. Ether ETP flows and USD-stablecoin circulation stayed negative.

ONE YES

+$211.2m

Bitcoin ETP flow

Five complete sessions

Direction: positive

TWO NOs

-$388.9m
-$2.368bn

Ether ETP flow

USD-stablecoin stock

Directions: negative

The stablecoin stock is not added to ETP flows. Only direction is compared.

> **Breadth is agreement, not addition.**

The vector was (+,-,-).

Each gauge keeps its own unit and clock. The comparison asks whether their signs agree.

GAUGE	WINDOW / VALUE	SIGN
Bitcoin ETP flow	5 sessions · +$211.2m	+
Ether ETP flow	5 sessions · -$388.9m	-
USD-stablecoin stock	7 days · -$2.368bn	-

Directional agreement: 1 of 3. This is a breadth check, not a price signal.

> **One positive column did not make the system broad.**

S1 · S2 · S3 · S5 | Completed windows · values rounded for display

One day carried the Bitcoin result.

October 19 contributed +$526.7m. The other four Bitcoin sessions together were -$315.5m.

WHAT BUILT THE +$211.2M WINDOW

Bars compare magnitudes. The signed arithmetic is +526.7m - 315.5m = +211.2m.

> **A valid positive window can still be concentrated.**

S1 · S5 | Contribution magnitude · US$m

Do not add a flow to a stock.

The units differ. The clocks differ. The economic mechanisms differ.

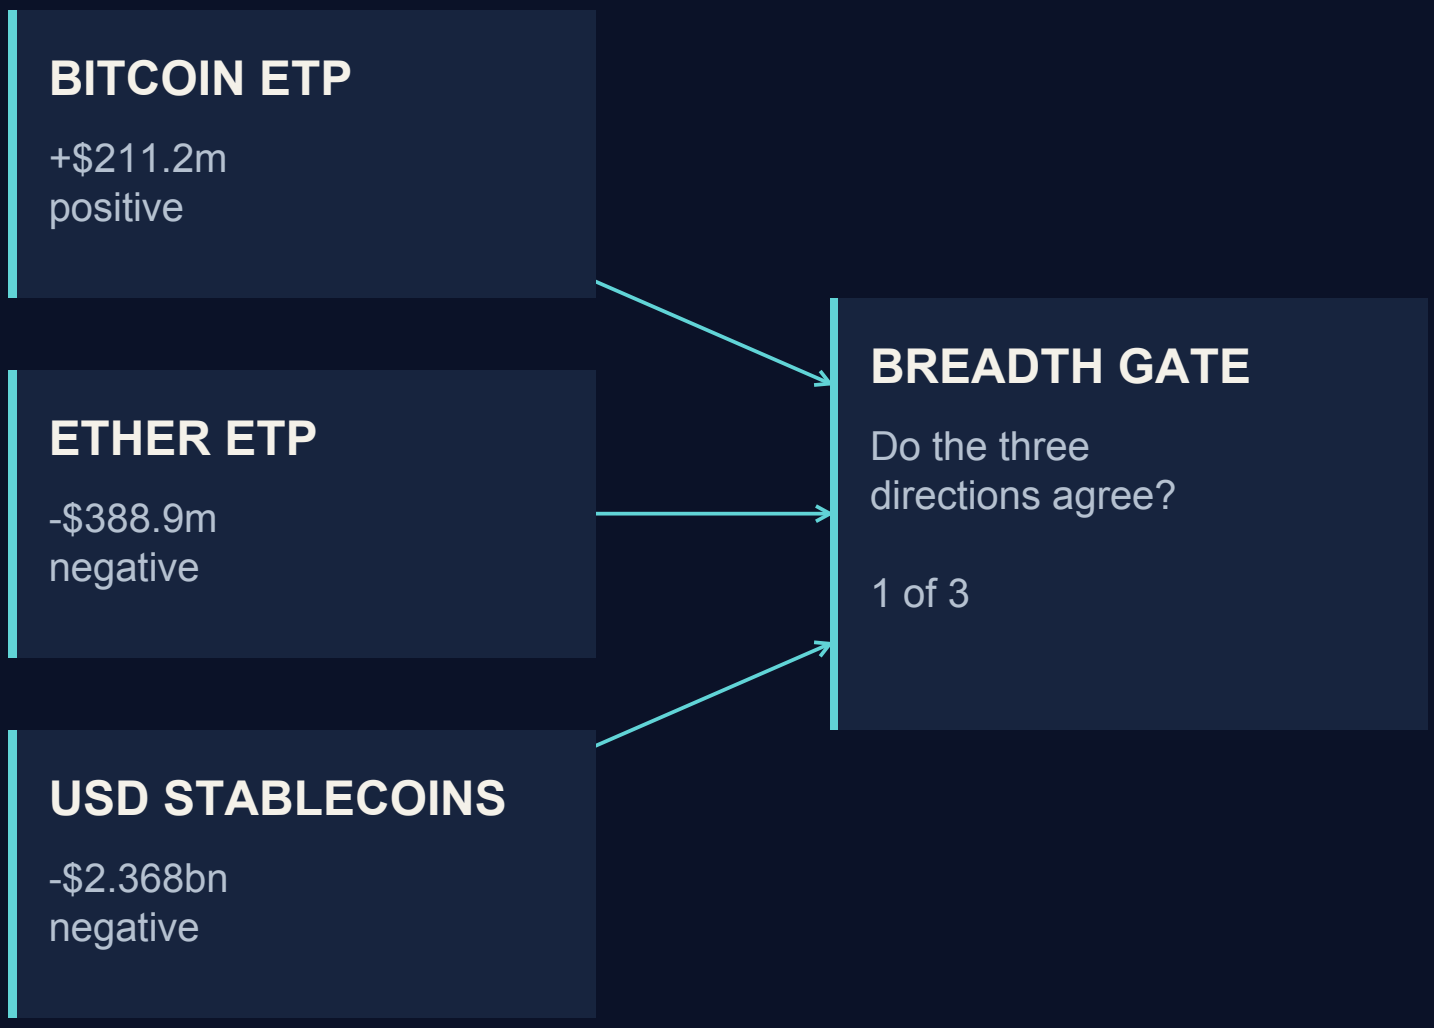

ETP FLOWS	STABLECOINS
A flow	**A stock**
US$ millions	US$ billions
U.S. fund sessions	Calendar days
Creation / redemption channel	Provider-defined circulation

Agreement can be informative. Addition would be misleading.

> **Compare direction without inventing one pool of money.**

Three windows enter.
No dollars cross the arrows.

Independent measurements feed a breadth question. The diagram does not claim transfer between rails.

Disagreement is the result—not a broken equation.

S1 · S2 · S3 · S4 · S5 | Directional topology · not fund tracing

A useful gate should be boring.

Protect the measurement from incomplete sessions, mixed units and premature action.

01

1 · Complete

Exclude sessions with unreported fund cells.

02

2 · Separate

Keep each gauge in its own unit and clock.

03

3 · Compare

Test the sign vector without inventing a total.

04

4 · Investigate

If all three agree, inspect price, basis and composition.

05

5 · Stop

No automatic trade, allocation or forecast follows.

October 21 was excluded because several displayed fund cells still contained dashes.

> **Agreement earns investigation—not a trade.**

One green gauge is one green gauge.

Bitcoin crossed zero. Ether and the stablecoin stock did not confirm it.

THE TEMPTING HEADLINE

The total turned green

Three gauges answered (+,-,-)

Keep the measures separate. Let breadth require agreement.

Dated evidence · No trade · No price forecast

> **Do not let one column borrow the credibility of the others.**
